Professional Summary

Lead Back End Node JS Developer with 6+ years owning production event-driven integrations, IoT telemetry pipelines, and cloud APIs in TypeScript, SQL, Node.js, PostgreSQL, MongoDB, AWS, GCP, Sequelize.
Drive monolith-to-microservices work and event-driven service boundaries with reliable messaging and clear ownership.
Own architecture decisions, code review, tests, CI, and mentoring so teams ship reliable software faster.
Day-to-day production stack: TypeScript, SQL, Node.js, PostgreSQL.

Technical Skills

Languages: TypeScript, SQL
Frameworks: Node.js, Node.js Services
Databases: PostgreSQL, MongoDB
Cloud: AWS, GCP
Architecture & Practices: Microservices, Sequelize, GraphQL, TypeORM, ORM, Iot, Microservices Architecture

Professional Experience

Quest Global Engineering Services - **Lead / Senior Backend Engineer** **Jul 2025 - Present**
Node.js, TypeScript, PostgreSQL, Sequelize, TypeORM, GraphQL, AWS, IoT, microservices

- Optimized RESTful APIs throughput and response times by eliminating Node.js event-loop blocking, introducing multi-tier Redis caching for hot device metadata, and tuning PostgreSQL query execution plans.
- Engineered and scaled event-driven microservices for SKF's global Lubrication & Condition Monitoring Cloud, handling millions of real-time industrial IoT telemetry and MQTT sensor events daily with 99.9% uptime.
- Eliminated peak-traffic database lock contention by restructuring PostgreSQL schema partitioning and replacing unindexed table scans with targeted composite indexes.
- Owned SKF cloud operations with Terraform/CloudFormation, IAM and VPC networking, CloudWatch alarms, and capacity planning that protected 99.9% uptime.
- Defined REST/GraphQL API contracts, DB access patterns, and coding standards, removing cross-team integration bottlenecks and establishing automated schema validation.

INTVERSE IT Services - **Senior Software Engineer (Backend & Data)** **Feb 2025 - Jun 2025**
Node.js, TypeScript, PostgreSQL, AWS, IoT

- Delivered asynchronous device messaging pipelines using MQTT brokers and Node.js microservices, reliably ingesting high-throughput sensor telemetry payloads into PostgreSQL.
- Automated AWS environments with Terraform/CloudFormation, Boto3, Jenkins pipelines, and container orchestration, introducing pre-flight validation to prevent configuration drift across staging and production.
- Delivered high-performance document ingestion pipelines in Node.js with multi-process workers and structured validation schemas, integrating basic OpenAI RESTful APIs endpoints to extract and tag metadata from enterprise knowledge documents.
- Designed multi-layer caching and query rewriting strategies that cut backend search latency across large indexed datasets.
- Instituted reusable TypeScript UI components integrating streaming backend RESTful APIs and secure JWT authentication.

Glidewell Software Services - **Software Engineer 2 (Backend & Infrastructure)** **Aug 2023 - Oct 2024**

Node.js, TypeScript, PostgreSQL, Sequelize, TypeORM, GraphQL, microservices

- Diagnosed PostgreSQL performance bottlenecks, remodeling complex SQL queries, connection pooling, and table indexing for enterprise ordering systems to resolve slow queries and eliminate lock contention, reducing server CPU load by 35%.
- Led L3 troubleshooting and RCA using distributed tracing and structured logging ELK Stack across microservices on RedHat Linux, cutting incident response time on production issues.
- Architected service integration layers with exponential backoff retry mechanics, fallback handling, and Kafka/RabbitMQ message queues, ensuring zero data loss during upstream rate limit spikes and connection timeouts.
- Structured Glidewell's internal workforce and laboratory management system covering time tracking, product assignment, production support, and logistics tracking integrations with FedEx, UPS, and DHL.
- Ran peer code reviews and mentored engineers on backend architecture patterns, transaction safety, and security best practices.

Srijan Technologies - **Software Engineer** **Aug 2022 - Jul 2023**

Node.js, TypeScript, PostgreSQL, MongoDB, Sequelize, GraphQL, AWS

- Assembled cloud infrastructure using AWS ECS, Lambda, Aurora, IAM, VPC, and CloudWatch to scale microservices and enforce access control.
- Modeled and shipped resilient backend services using Node.js and Express for multi-tenant SaaS applications, owning the full technical cycle from data modeling through RESTful APIs delivery with comprehensive unit testing and CI linting.
- Integrated a third-party payment gateway with intelligent event retry logic and an automated Kafka-backed reconciliation engine to safely process financial transactions and prevent data loss.

Athena & Tully Pte - **Full-Stack Developer** **Oct 2021 - Jul 2022**

Node.js, TypeScript, MongoDB, Mongoose, PostgreSQL, Sequelize, GraphQL

- Designed and built the complete backend architecture for a multi-tenant platform, breaking down complex business logic into scalable, highly available Node.js microservices with Kafka-based event communication between services.
- Built Python ETL scripts to migrate legacy relational database records across multiple disparate schemas, preserving data integrity through rigorous validation pipelines.

Rubico IT Pvt Ltd - **Software Developer** **Sep 2019 - Sep 2021**

Node.js, TypeScript, MongoDB, Mongoose, PostgreSQL, AWS

- Engineered backend web systems end-to-end, from MongoDB schema design and data modeling through RESTful API construction and message queue integration for major client deliverables.
- Owned core application infrastructure for client projects, taking responsibility from database design through API delivery and release readiness.
- Provisioned AWS EC2, S3, IAM, and VPC for application hosting, object storage, and network isolation across client environments.
- Established secure deployment practices by configuring server firewalls and OS patch management routines on hosted environments.

Artisanssoft - **Associate Developer** **Feb 2019 - Jul 2019**

Node.js, TypeScript, MongoDB, Mongoose

- Developed and deployed backend endpoints using Node.js/Express, integrating third-party payment gateways and authentication flows that processed high volumes of transactions with zero security incidents.

Selected Achievements

SKF IoT API Latency: Sub-100ms p99 API latency under high-frequency telemetry load
Telemetry Scale: Millions of daily industrial telemetry events at 99.9% uptime
Bun Ingestion Workers: Deployed Bun runtimes cutting container memory overhead on hot paths
Deploy Speed: Rollouts from ~40 minutes to under 8 minutes via Docker/LXC

Education

Master of Computer Applications (MCA), STEM, Uttaranchal University (2016 - 2018)

Bachelor of Computer Applications (BCA), STEM, Uttaranchal University (2013 - 2016)
